

# BRISBANE OFF ROAD CYCLING PLAN

The aim of the Brisbane Off Road Cycling Plan was to meet the needs of the rapidly growing off-road cycling community by developing a safe, well-planned and connected network of off-road cycling facilities that protect Brisbane's natural environment.

The Plan delivered high level concept designs for the City that ensure that off-road cycling is sustainable and protects the City's biodiversity values, ensures future off-road cycling facilities will achieve value for money through sustainable, well planned and well-designed infrastructure, and develops a forward-thinking plan that includes latest and future trends and technology.

Tredwell have the experience and knowledge to guide future investment in off-road cycling facilities within natural areas and parks in New Zealand, including:

## Meeting the Needs of the Cycling Community

Like Brisbane, New Zealand has a rapidly growing off-road cycling community. By developing a safe, well-planned, and connected network of off-road cycling facilities, tailored to the local context, Tredwell can address the needs of this expanding community. It would provide opportunities for diverse riding experiences, catering to different skill levels and preferences.

## Environmental Protection and Sustainability

New Zealand is known for its stunning natural environment and rich biodiversity. By ensuring that off-road cycling facilities are developed in a manner that protects and preserves these natural assets, Tredwell can align with the country's environmental values. Measures can be taken to minimise the impact on sensitive ecosystems, adopt sustainable construction practices, and encourage responsible trail use to protect the biodiversity values of the area.

## BRISBANE OFF ROAD CYCLING PLAN

### Value for Money and Well-Designed Infrastructure

By emphasising sustainable, well-planned, and well-designed infrastructure, Tredwell ensure that future off-road cycling facilities in New Zealand achieve value for money. This includes considering factors such as maintenance costs, long-term viability, and resource efficiency. By incorporating sound design principles, the facilities would offer a high-quality experience for cyclists while minimising environmental and financial costs.

### Forward-Thinking Approach

The Brisbane strategy embraces the latest trends and technology including integrating innovative features and technologies into the off-road cycling facilities, such as smart trail systems, digital mapping, and user feedback mechanisms. By considering future trends, Tredwell can ensure that the facilities remain relevant, adaptable, and appealing to cyclists

By implementing a strategy that considers these aspects, New Zealand's cycling market would benefit from a comprehensive and sustainable network of off-road cycling facilities. Cyclists would have access to well-designed and safe trails that showcase the country's natural beauty, while also respecting and preserving the environment. This would contribute to the growth of the cycling community, promote active lifestyles, and attract both local and international cyclists, boosting tourism and the local economy and align with Tredwell's Vision of 'connected, happy, active, people'.
