

# RAVENSTHORPE SPORT AND RECREATION MASTER PLAN

Tredwell have extensive experience in developing master plans for sporting precincts of various scales. The Shire of Ravensthorpe, located in south-eastern Western Australia appointed Tredwell to develop a Sport and Recreation Master Plan for the Shire in collaboration with the local community. The Master Plan strategically identified projects and initiatives to enhance sport and recreation in the Shire. The master plan includes a detailed implementation plan which is prioritised, identifies partners and resource requirements.

As part of the Shire Wide Master Plan, it was identified that the Hopetoun Sporting Precinct required a site master plan developed to cater to its growing club numbers and demand for higher quality facilities. Tredwell developed a comprehensive and community driven master plan concept for the site, addressing the requirements of the local clubs and community members and ensuring modern and up-to-date design solutions were utilised.

Tredwell's experience in developing master plans for hundreds of sporting precincts across Australia allow for us to bring our international knowledge and expertise to New Zealand to bring facilities to the forefront of latest and predicted future trends, as well as mitigating future site issues prior to their arrival.

Ways in which Tredwell's experience can be beneficial to sporting precincts within New Zealand include:

### **Knowledge of sports and recreation planning**

Tredwell have completed over 300 sport and recreation projects and understand the various components involved in creating a successful sporting precinct. Tredwell ensure that the specific needs and preferences of local communities are met through the tailored design of facilities and infrastructure, through intensive community and key stakeholder engagement.

## Understanding of regulatory and environmental considerations

Developing a sporting precinct requires compliance with various regulations and environmental considerations. Tredwell's experience in navigating the Australian regulatory framework and environmental requirements has allowed us to streamline the process in New Zealand. Tredwell can ensure that the master plan adheres to local laws and regulations, minimising delays and potential issues during the future development phase.

## Best practices and lessons learned

Tredwell's experience has allowed us to identify best practices and learn from past projects. Through encountering various challenges and obstacles throughout our work we can avoid potential pitfalls. This includes understanding community needs, incorporating feedback from stakeholders, and implementing effective strategies for long-term sustainability and maintenance of sporting precincts.

## Local community engagement

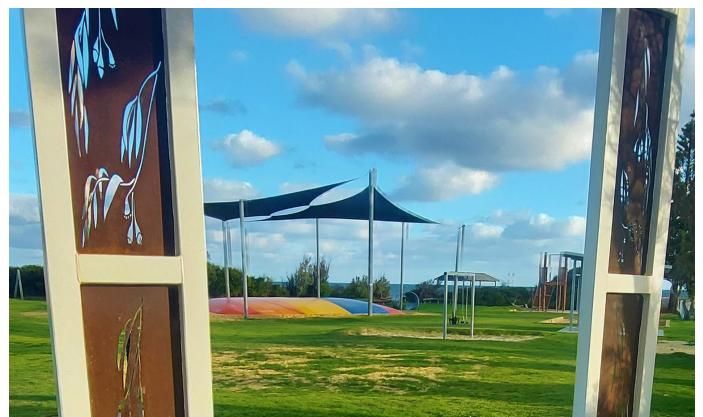

Tredwell's experience in community engagement and our alignment with the IAP2 Public Participation Spectrum allows us to gather community input, conduct surveys, and facilitating public consultations in engaging and effective ways. This expertise is invaluable and enables Tredwell to engage with local communities effectively and create a master plan that resonates with their unique requirements.

## Adaptability and customisation

Tredwell conduct thorough research and analysis to understand the specific sporting landscape, demographic factors, cultural considerations, and regional preferences for each location. By tailoring our approach and treating no two jobs the same, Tredwell develop master plans that align with the unique characteristics of the local environment.

In summary, Tredwell's experience in developing numerous sport and recreation master plans equips us with valuable knowledge, best practices, and community engagement strategies that can be applied to New Zealand townships and facilities.
